

Corru-Fill® Fact Sheet

Tired of messing with shipping peanuts? Worried about the ecological impact of petrochemical packing products? Read on!

Why switch to Corru-Fill®?

It is economical, 100% biodegradable, environmentally friendly, reduces landfill waste, increases the life of trees and it safely ships practically any item!

Corru-Fill® is immediately reusable by the receiver or it can be recycled with other household recycling materials!

How is Corru-Fill® Made?

Corru-Fill® is made from old and excess corrugated boxes diverted from landfills. A machine simply shreds the recycled corrugated boxes into small strips.

Its unique matchstick-like design creates a lattice which holds your fragile valuables suspended in the center of your box, surrounded 360 degrees by cushioned cardboard. This cardboard "packing straw" won't shift, move or creep inside. With no movement, your item is protected on all sides.

- 100% Biodegradable
- Absorbent, so it contains leaks when being shipped.
- Static free. Great for shipping electrical and computer components.
- Doesn't settle or crumble.
- Handles ANY weight!
- Eliminates need to double box.
- Reduces breakage.
- Available in a variety of bag sizes.
